SIMPLIFIED DELIVERY

Severtson Screens' silver 3D screens can be folded and packed into a much smaller crate without any loss in structural integrity or performance.

Severtson's new folded screen process not only reduces international shipping fees, the smaller packaging simplifies delivery to theaters and is more convenient for installers, as well.

YOUR SCREEN, YOUR OPTIONS

Severtson folded cinema screens are available in both the industry-acclaimed SeVision 3D GX and Ultra-Wide 3D in either standard or micro-perforation.

Viewing angles range from 30 to 40 degree half-gain depending on the specific screen gain requested.

NEW TECHNOLOGY

In the past, the idea of folding a screen for shipment, delivery, and installation has been deemed impossible because there was no method of doing it without degrading the quality and performance of the screen, or ruining it altogether... NOT ANYMORE!

Severtson Screens' optical coating uses an ultra-fine micron flake, allowing screens TO BE FOLDED and producing a SHARPER, MORE UNIFORM IMAGE.
